How to Use This Guide

1.

Start with the Line Drawing

Begin by transferring the provided line art template onto your watercolor paper. Use a light touch with a pencil or a waterproof ink pen to establish the outlines and main structures of the subject. This foundation is crucial for guiding your subsequent steps.

2.

Study the Values

Analyze the grayscale reference to understand the distribution of light and shadow. Identify the darkest areas (core shadows), the mid-tones, and the brightest highlights. This step helps you plan your color application and create depth and realism in your final piece.

3.

Paint Your Version

Apply your watercolor paints, starting with light washes and gradually building up color and intensity. Refer to the value study for guidance on shading. Feel free to experiment with your own color palette and techniques to create a unique interpretation. Enjoy the process!

Tips for Painting from References

1. Observe Shapes, Not Just Objects:

Break down complex subjects into basic geometric forms.

2. Simplify Your Palette:

Start with a limited color range to understand values.

3. Focus on Light and Shadow:

Identify the direction of light to create depth.

4. Don't Aim for Perfection:

Capture the essence, not every detail.

5. Practice Regularly:

Consistent small studies build skill over time.
